Professional Summary

Technical product leader with 12+ years spanning software engineering, backend systems, APIs, data-intensive applications, and cross-functional delivery. Strong track record translating technically complex backend, integration, and data-flow work into clear requirements, release coordination, and well-communicated execution across engineering and business stakeholders. Especially effective in ambiguous environments where product sense, technical fluency, quality ownership, and operational clarity all matter at once.

Core Skills

Backend, API, and data-pipeline product ownership · Technical requirements, acceptance criteria, and release planning · API design, integrations, and schema/data-flow change management · Production systems, deployment coordination, and quality ownership · Roadmap shaping, scoping, and ambiguity reduction · Cross-functional communication across engineering, product, design, and operations · Distributed team collaboration and async documentation · Python, TypeScript, Node.js, PostgreSQL, GraphQL, OAuth/JWT · Docker, Terraform, CI/CD, event-driven workflows

Professional Experience

Book Bites Inc. — Founder / Technical Consultant

Remote | 2021–Present

- Provide architecture, engineering, product, and delivery leadership for startups and mission-driven teams from discovery through execution and iteration.
- For NYC Campaign Finance Board's Contribute app, partner with a team of engineers and product-owning stakeholders to shape roadmap, define requirements, run research, create OKRs, and establish metrics for stability, workflow efficiency, estimation accuracy, and user success.
- Led emergency operational and product coordination during a major donation surge, helping the team handle significantly higher data volume with better resiliency and faster response times.
- Advise early-stage and resource-constrained teams on backend-adjacent product strategy, technical architecture, roadmap tradeoffs, and delivery planning in technically complex environments.

Frequency Machine / Cerca — Head of Product & Engineering Lead

Remote | 2021–2024

- Joined as the first technical hire and helped define, build, launch, and scale a production platform spanning backend services, APIs, real-time communication, and customer-facing applications.
- Translated platform, workflow, and operational needs into clear product direction while leading a small cross-functional team across engineering, product, design, operations, and business stakeholders.
- Re-architected core data access patterns and event-driven system flows, improving application startup time by 400% and reducing long-term technical debt.
- Designed API-driven services and human-in-the-loop operational workflows, including real-time communication, alerting, escalation, and service handoffs that bridged product requirements with live operational constraints.
- Owned technical planning, hiring, roadmap tradeoffs, code review, and product-shaping conversations in a fast-moving startup environment.

Def Method — Senior Software Engineer / Engineering Manager

New York, NY | 2016–2021

- Delivered complex client software engagements across backend, full-stack, mobile, data, and platform systems for both enterprise and startup environments.
- Led design and delivery of API- and integration-heavy client systems, with recurring emphasis on maintainability, delivery quality, and cross-team coordination.
- Led a 5-engineer squad for Jetblack / Walmart Labs building a greenfield logistics coordination product, balancing hands-on engineering with planning and coordination across operationally complex systems.
- Contributed Python engineering to JOOR's ETL pipeline for ingesting and normalizing large client datasets, while supporting containerization and Kubernetes modernization work.
- Conducted performance reviews, mentored engineers, and helped establish sustainable delivery practices in Agile consulting environments.

General Assembly / NY Code & Design Academy — Software Instructor

2013–2016

- Taught full-stack web development and mentored students in software engineering fundamentals, modern practices, and system-level thinking.

Additional Domain Alignment

Climatebase Fellowship — Innovator Distinction

2025

- Selected for a competitive climate fellowship focused on climate-positive ventures at the intersection of software, data, and decarbonization.
- Built working fluency in carbon accounting concepts, decarbonization levers, and climate-driven product strategy.

Brine & Ember — Fellowship Capstone

2025

- Explored a circular food venture centered on seaweed-based carbon sequestration and biochar production.
- Produced technical and business analysis including process diagrams, techno-economic assessment, and market framing work.

Education

General Assembly — Web Development Immersive, 2013

New York University (Tisch) — BFA, Film & Television Production, 2006
