Professional Summary

Product-minded senior full-stack software engineer and engineering leader specializing in technically complex domains, with 12+ years of experience building API-driven, data-intensive web, mobile, and internal software systems across startups, consulting environments, and large-scale organizations. Strong track record shipping production software in ambiguous conditions, designing backend services and integration surfaces, improving performance and reliability, and shaping the data flows and operational workflows that keep real systems working over time. Especially effective in environments where software engineering, systems thinking, and product judgment all matter at once, and especially energized by technically ambitious missions where hands-on engineering can grow into broader cross-functional leverage over time.

Core Skills

Full-stack software engineering · Internal tools and enterprise applications · API design, integrations, and backend systems · Production systems, operational reliability, and maintainability · Data-intensive applications, ETL pipelines, and workflow design · React, TypeScript, Node.js, Python · GraphQL, OAuth/JWT, PostgreSQL · Terraform, Docker, CI/CD · Technical leadership, mentorship, hiring, code review · Cross-functional collaboration across engineering, product, design, and operations

Professional Experience

Book Bites Inc. — Founder / Technical Consultant

Remote | 2021–Present

- Provide architecture, engineering, and delivery leadership for startups and creative technology teams from discovery through execution and iteration.
- Lead development of production software systems across mobile, web, and backend-adjacent product surfaces, with an emphasis on maintainability, reliability, and pragmatic delivery.
- Advise early-stage and resource-constrained teams on technical architecture, API boundaries, roadmap tradeoffs, delivery planning, and product strategy in technically complex environments.
- Help operationally sensitive products handle higher-volume usage, workflow complexity, and evolving business needs by improving system clarity, team execution, and software resilience.

Frequency Machine / Cerca — Head of Product & Engineering Lead

Remote | 2021–2024

- Joined as the first technical hire and helped define, build, launch, and scale a production platform spanning backend services, APIs, real-time communication, and customer-facing applications.
- Led a small cross-functional team across engineering, product, design, operations, and business stakeholders while remaining deeply hands-on technically.
- Re-architected core data access patterns and event-driven system flows, improving application startup time by 400% and reducing long-term technical debt in a fast-moving, technically demanding product environment.
- Designed API-driven services and operational workflows, including real-time communication and human-in-the-loop service patterns that bridged product requirements with live operational constraints.
- Owned technical planning, hiring, mentorship, code review, and product-shaping conversations in a fast-moving startup environment.

Def Method — Senior Software Engineer / Engineering Manager

New York, NY | 2016–2021

- Delivered complex client software engagements across backend, full-stack, mobile, data, and platform systems for both enterprise and startup environments.
- Led a 5-engineer squad for Jetblack / Walmart Labs building a greenfield logistics coordination product, balancing hands-on engineering with planning and cross-team coordination across operationally complex systems.
- Contributed to Facebook engagements involving internal tools, rapid technology adoption, and React-based product exploration work.
- Led design and delivery of API and integration-heavy client systems, with recurring emphasis on maintainability, delivery quality, and cross-team coordination.
- Contributed Python engineering to JOOR's ETL pipeline for ingesting and normalizing large client datasets, while supporting early containerization and Kubernetes modernization work.
- Conducted performance reviews, mentored engineers, supported QA modernization, and helped establish sustainable engineering practices.

General Assembly / NY Code & Design Academy — Software Instructor

2013–2016

- Taught full-stack web development and mentored students in software engineering fundamentals, modern practices, and system-level thinking.

Additional Domain Alignment

Climatebase Fellowship — Innovator Distinction

2025

- Selected for a competitive climate fellowship focused on climate-positive ventures at the intersection of software, data, and decarbonization.
- Built working fluency in carbon accounting concepts, decarbonization levers, and climate-driven product strategy.

Brine & Ember — Fellowship Capstone

2025

- Explored a circular food venture centered on seaweed-based carbon sequestration and biochar production.
- Produced technical and business analysis including process diagrams, techno-economic assessment, and market framing work.
- Demonstrated ability to enter a technically serious domain quickly and connect software, systems thinking, and operational reality.

Technologies

Languages & Frameworks: Python, TypeScript, Node.js, React, React Native, Swift, Kotlin

Systems & Platform: REST APIs, GraphQL, OAuth/JWT, CI/CD, Docker, Terraform, Kubernetes

Data & State: PostgreSQL, ETL pipelines, event-driven workflows, Redux, Zustand

Leadership & Delivery: technical ownership, hiring, mentorship, planning, prioritization, cross-functional execution

Education

General Assembly — Web Development Immersive, 2013

New York University (Tisch) — BFA, Film & Television Production, 2006
