Professional Summary

Technical leader and systems architect with 12+ years of experience designing business systems, information architecture, and operational workflows across engineering, product, and operations. Track record translating ambiguous operational challenges into scalable solutions — from data pipelines and API integrations to governance frameworks and process automation. Equally effective at hands-on technical execution and cross-functional program leadership.

Core Strengths

Business systems architecture & information design · Cross-functional program leadership · Workflow design & process automation · Data pipelines, APIs & system integrations · Governance & documentation standards · Team leadership, hiring & mentorship · Systems thinking & scalable architecture

Experience

Book Bites Inc. — Founder / Technical Consultant

Remote | 2021–Present

Consulting engagements for **Clipper Digital**, **Everplans**, and the **New York City Campaign Finance Board**.

- Lead business systems and process transformation for the NYC Campaign Finance Board's Contribute application, coordinating across engineers and agency stakeholders to translate policy constraints and business goals into technical roadmaps.
- Designed governance frameworks, OKRs, and metrics infrastructure from scratch — aligning initiatives to strategic north stars and creating structured accountability where none existed.
- Led an operational overhaul during a major campaign-driven data surge, redesigning workflows and data processing pipelines to handle significantly higher volumes with greater resiliency.
- Deliver iOS engineering for Everplans across vital document management and end-of-life preparation features in a sensitive user-trust domain.

Frequency Machine — Head of Product Management / Engineering Lead (Cerca)

Remote | 2021–2024

- First technical hire; helped define, build, and ship a multi-actor service platform connecting users with domain experts, owning product direction and hands-on implementation.
- Designed the platform's information architecture including a human-in-the-loop routing and matching system with structured alerting, handoff workflows, and data capture.
- Built API-driven backend systems, real-time event-driven workflows, and integration layers connecting communication services, user state management, and operational coordination.
- Re-architected core data access patterns, improving system startup performance by 400% under heavy conversation loads.

Def Method — Senior Software Engineer / Engineering Manager

New York, NY | 2016–2021

Client engagements: **JOOR** · **Jetblack (Walmart Labs)** · **Facebook** · **FloodHelpNYC** · **Pager** · **Casper**

- Delivered complex systems work across data, platform, and integration engagements in an Agile-XP consultancy centered on TDD, continuous delivery, and pair programming.
- Contributed to a Python ETL pipeline at JOOR for ingesting, validating, and structuring large volumes of client data; supported Kubernetes and Docker modernization.
- Led a 5-engineer squad at Jetblack / Walmart Labs building a greenfield logistics coordination system, driving planning, implementation, and cross-team alignment with DevOps and ML teams.

- Built React frontend features for Facebook; delivered consulting engagements for FloodHelpNYC, Pager, and Casper across web and API systems.
- Managed engineering teams, conducted performance reviews, mentored engineers, and led QA modernization initiatives.

AwesomenessTV — Software Engineer

Los Angeles, CA | 2014–2015

- Built backend and frontend systems across Ruby on Rails, AngularJS, and Swift in a media technology environment.

General Assembly / NY Code & Design Academy — Software Instructor

2013, 2016

- Taught full-stack web development and engineering fundamentals; mentored students in systems thinking and software practices.

Climate & Mission Alignment

Climatebase Fellowship — Innovator Distinction (2025)

Collaborated with climate founders and technologists on decarbonization strategy, carbon accounting, and climate-driven product development.

Brine & Ember — Founding Developer / Fellowship Capstone (2025) · brineandember.earth

Explored a circular food venture centered on seaweed-based bioenergy and biochar production, integrating carbon sequestration with food-system circularity. Produced technical and business analysis including process diagrams and techno-economic assessment.

BELT — Founder / Developer (2025)

Built early-stage climate software for evaluating biochar and circular carbon removal venture viability, including methodology analysis, scenario modeling, and data-driven assessment tooling.

Technical Skills

Languages & Frameworks: Python, SQL, TypeScript, JavaScript, Ruby, Ruby on Rails, Node.js, React, React Native, Swift, Kotlin

Platform & Data: REST APIs, GraphQL, PostgreSQL, ETL pipelines, Docker, Kubernetes, Terraform, event-driven architectures

Delivery & Practices: CI/CD, TDD, Agile-XP, cross-functional delivery, code review, pair programming, process governance

Education

General Assembly — Web Development Immersive, 2013

New York University (Tisch) — BFA, Film & Television Production, 2006
